SUBJECT: Request for MTEP21 Study Scope Feedback

Dear Ms. Boegeman,

Thank you for your request for OMS input to this year's MISO Transmission Expansion Plan, MTEP21.

The OMS is supportive of the multiple sub-regional planning studies that are already underway and the renewed emphasis on long-range transmission planning at MISO. Together these efforts cover a range of state interests that expand the scope of this year's annual planning cycle. State regulators have also been active participants in the development of both the revised MTEP futures process and futures. The OMS is supportive of the direction MISO has taken based on stakeholder input in development of MTEP21 futures.

In addition, the OMS looks forward to opportunities to build on this work in furtherance of our Long-Range Transmission Planning Principles. The principles stress the importance of moving forward in a timely manner and the leadership role OMS plans to take in this long-range planning process. We look forward to continuing our work with MISO staff and stakeholders on this effort.

The OMS does not have any additional feedback on the scope of MTEP21 at this time.

Sincerely,

A handwritten signature in black ink, appearing to read "Matthew Schuerger", is written over a light blue horizontal line.
