

Organization of MISO States – Transmission Planning Work Group

March 1, 2019

[PAC MTEP20 Futures \(20190213\)03/01/2019](#)

In the February 13 Planning Advisory Committee meeting, MISO requested stakeholder feedback on the MISO proposal on MTEP 20 Futures. Given that there have been relatively few to no changes in policy or economic trends, does MISO's MTEP20 futures proposal to not make any definitional changes and to only update the base data seem reasonable? Please submit feedback by Friday, March 1, 2019.

Feedback: The OMS Transmission Planning Work Group agrees with MISO that the MTEP20 futures proposal to not make any definitional changes and to only update the base data is reasonable. However, the work group wants to emphasize that MISO and its stakeholders should take an expansive view of updating the base data. We also are interested in a detailed presentation and discussion of projected generation resource retirement assumptions and practices.
