

OMS-MISO Survey

Feedback is sought on:

- Maintaining same calculation logic for units in the Generation Interconnection queue
- Reporting results in a UCAP basis for better alignment with other resource adequacy metrics

The OMS Resources Work Group (OMS RWG) supports MISO's proposal to maintain the current weightings for potential resources in the different phases of the DPP queue. The OMS RWG also generally supports the idea of changing the reporting of results in the OMS-MISO Survey on a UCAP basis to better align with other resource adequacy metrics that MISO utilizes. However, as was asked at the December RASC meeting, the OMS RWG would like to see how this shift to reporting in UCAP would have impacted the results from last year's OMS-MISO Survey, and requests that MISO provide this information before a final decision to shift to reporting in UCAP is reached. This does not represent a position of the OMS Board of Directors.
