

PAC: MVP Triennial Review Proposal (20210428)

In the April 28 meeting of the Planning Advisory Committee (PAC), MISO proposed changes to the MVP review Tariff requirements.

---

The OMS Transmission Planning Work Group (OMS TPWG) appreciates the opportunity to provide comments on the Multi-Value Projects (MVP) Costs and Benefits Review and Reporting Tariff changes. This feedback does not represent a position of the OMS Board of Directors.

After reviewing the tariff changes, the OMS TPWG is supportive of the revisions and agrees that reporting has been a limited review of the MVPs. We would be supportive of MISO continuing to work on potential modifications to the MVP methodology and its implementation for future projects. The OMS TPWG would like to see MISO work on identifying metrics that show how, and to what extent, MVPs contribute to system reliability and efficiency during max gen events, how they have contributed to increased flows across and through the footprint, and how they have relieved congestion and/or enhanced renewable generation.
