

PSC: MTEP Selection of Transmission Alternatives (IR091) (20210209)

During the February 9, 2021 Planning Subcommittee (PSC) meeting, MISO provided a review of the status of IR091. MISO shared a proposed timeline for submitting alternatives into the MTEP process. Stakeholder feedback is requested on the timeline presented.

The OMS Transmission Planning Work Group (OMS TPWG) thanks MISO for allowing us to provide feedback on the MTEP Selection of Transmission Alternatives Integrated Roadmap Item (IR091). We are supportive of providing thirty days for stakeholders to provide non-transmission or transmission alternatives after MISO has posted the ongoing MTEP model on its CEII SharePoint. One solution could be that MISO post the MTEP models by May 1st and allow the stakeholders thirty days to provide alternatives by May 31st. However, if MISO posts the MTEP models after May 1st, the OMS TPWG recommends that MISO extend the deadline for transmission alternatives to thirty days after the date of posting. The OMS TPWG would appreciate it if MISO required the transmission owners to continue to update their project information, including the most limiting transmission system constraint on SharePoint prior to the second sub-regional planning meeting. This feedback does not constitute a position of the OMS Board of Directors.
