

OMS Resources Work Group Feedback

In the July 7, 2022 meeting of the Loss of Load Expectation Working Group (LOLEWG), stakeholders were invited to provide comments on the potential sunset of the LOLEWG at the end of 2022.

The OMS Resources Work Group (OMS RWG) appreciates that MISO wants to conduct its meetings in the most efficient manner and avoid duplicating policy and technical discussions within multiple forums. However, the OMS RWG opposes sunsetting the Loss of Load Expectation Working Group (LOLEWG) at this time. As we implement changes to the Resource Adequacy Construct and work to align MISO's annual LOLE study with these changes, the work of the LOLEWG will continue to be extremely important. It is essential, for both transparency and thorough stakeholder review, that a focused forum remain for this topic.

This is OMS work group feedback and does not represent a position of the OMS Board.
