

**Organization of MISO States (OMS)
Resources Work Group (RWG)
Response to RASC Feedback Request of October 12, 2022
Submitted on October 31, 2022**

In the October 12, 2022 meeting of the Resource Adequacy Subcommittee, stakeholders were provided the 2027-28 Out-Year Capacity Import Limit and Capacity Export Limit [Study Scope](#). MISO opened a feedback window with comments or questions due by October 31, 2022.

Feedback:

The OMS Resources Work Group (RWG) has reviewed MISO's presentation on its Out-Year Capacity Import Limit and Capacity Export Limit Study Scope and appreciates the opportunity to provide feedback. The RWG generally supports MISO's efforts to study the potential annual import and export capability of Local Resource Zones. However, based on past experience, the RWG questions the usefulness of these results. The RWG notes that these calculations have fluctuated dramatically year-to-year thereby diminishing their value to state regulators and resource planners. The RWG also notes that capacity import limits are more important than export limits for purposes of resource planning and a higher degree of certainty in these calculations is desired.

This feedback is from an OMS work group, and it is not a formal response of the OMS Board of Directors.
